

CF SOL Staking Reward Rate Index

Index Description

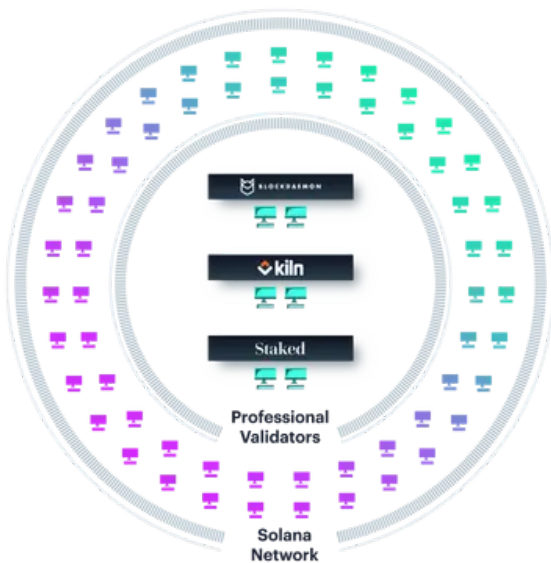

The CF SOL Staking Reward Rate is part of the CF Staking Reward Rate Series, offering a daily calculation that represents the annualized percentage reward rate for staking SOL on its native blockchain Solana. The reward rate is calculated based on the observed staking rewards and active staked balances of the Constituent Staking Service Providers's delegators. Since staking rewards are not distributed daily, the index will display a value of zero on days when no rewards are recorded within the 24-hour observation period. See the factsheet and the methodology for more information.

The published reward rate is an aggregated measure of these contributions, providing a transparent overview of the economic incentives associated with SOL staking. The index is calculated and published once a day at 4:00pm London Time. The index was launched on November 12th 2024, all values provided prior to inception date are backtested.
